

Configure ADAM-6100EI Module in CX-One

Product:

ADAM-6100EI Series

Abstract:

Introduction of ADAM-6100EI Series connection to OMRON PLC

Description:

In this document, we will demonstrate how to connect ADAM-6100EI module to OMRON PLC by CX-One

Contents

- [Configure ADAM-6100EI by AdamApax.NET Utility](#)
- [Network Configurator to Setup Network](#)
- [CX-programmer to Test the Configuration](#)

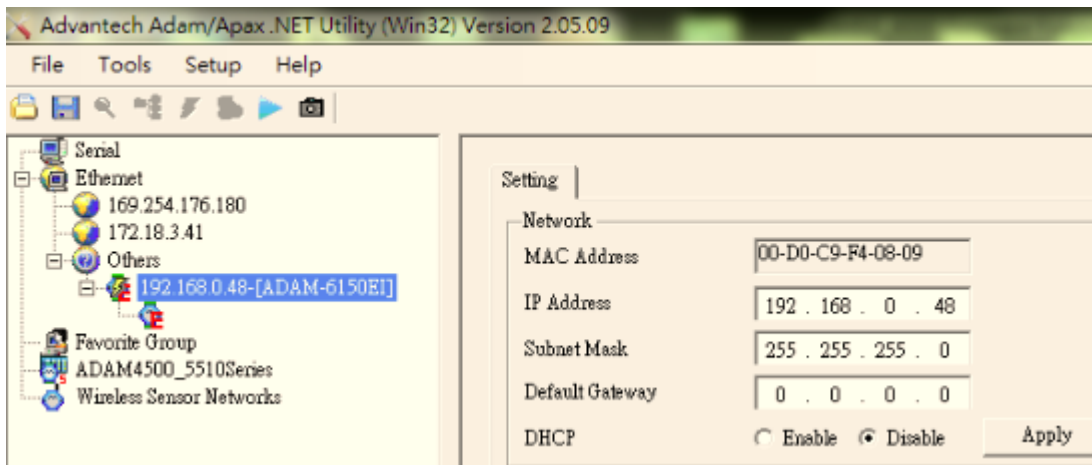

Configure ADAM-6100EI by AdamApax.NET Utility

1. Turn the ADAM-6100 EI to Initial Mode

Initial mode Normal mode

2. Use *AdamApax.NET Utility* to configure the IP of ADAM-6100-EI → turn to Normal Mode → Re-plug the power

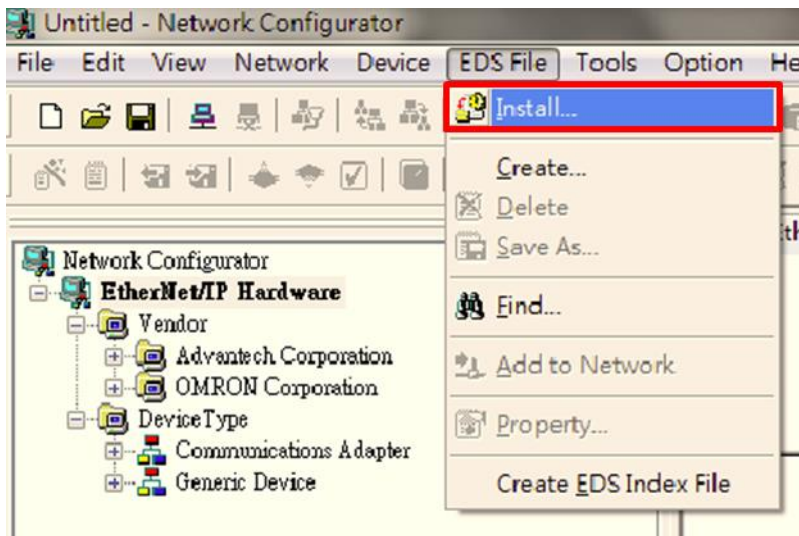

Network Configurator to Setup Network

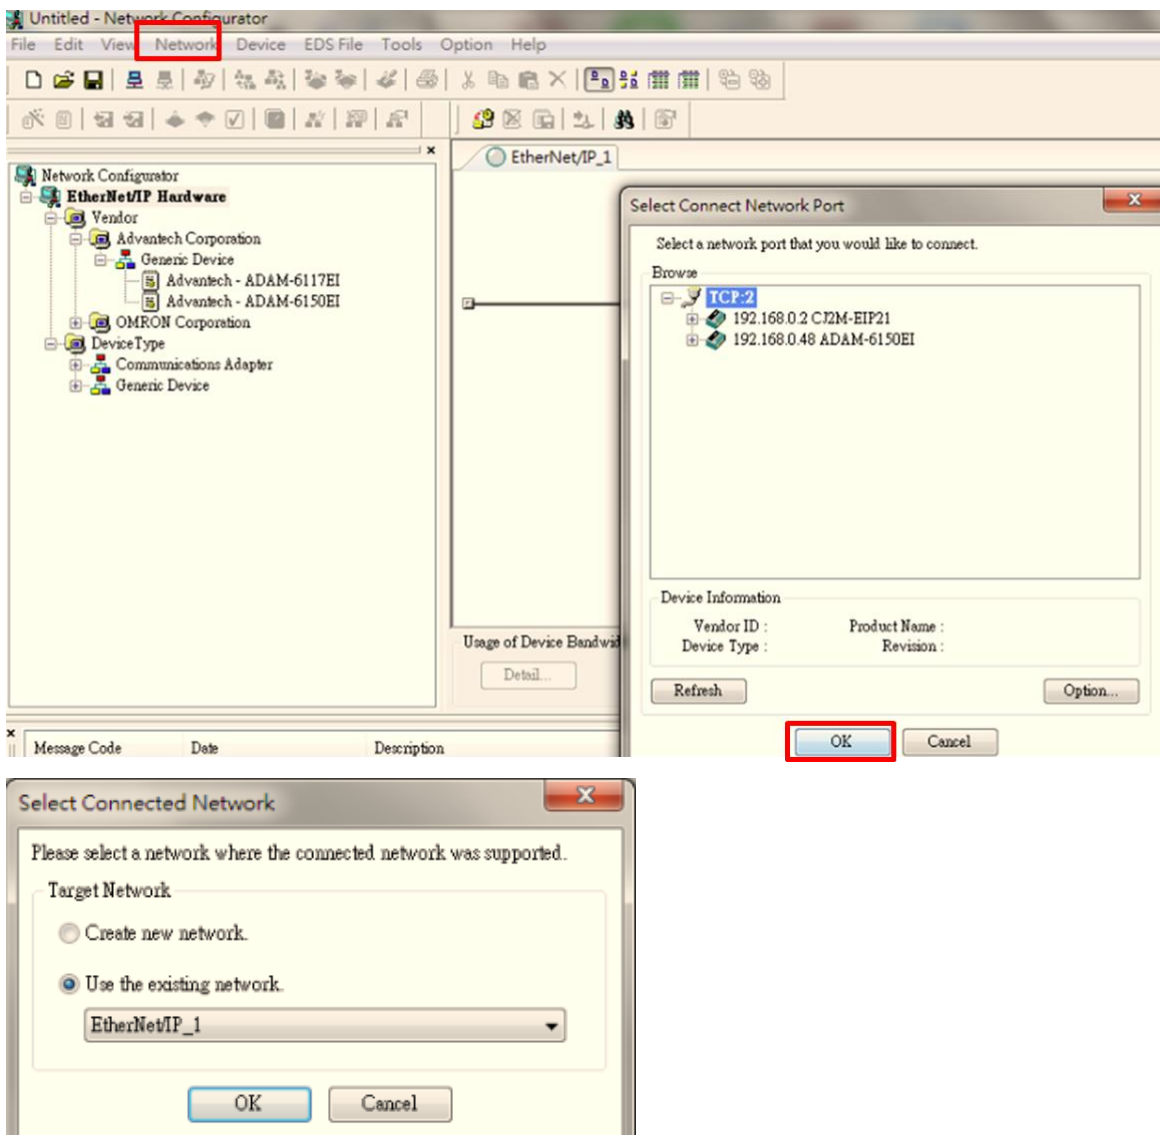

1. Execute the *Network Configurator* from start menu

- Click **EDS file**→Click **Install** to install the EDS file and icon

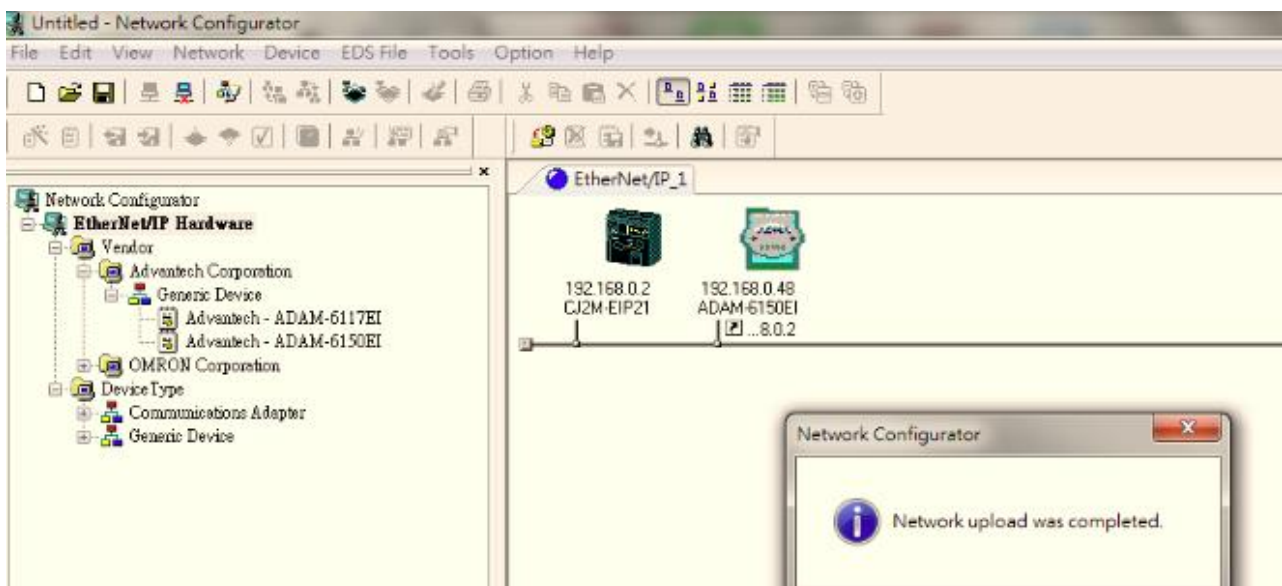

- Click **Network**→Click **Connect**, and then Omron PLC and ADAM-6150EI are found in the Network→Click **OK**→select the existing Network EtherNet/IP_1

4. Click **Network**→**Upload**→Select Target Devices→Click **OK**

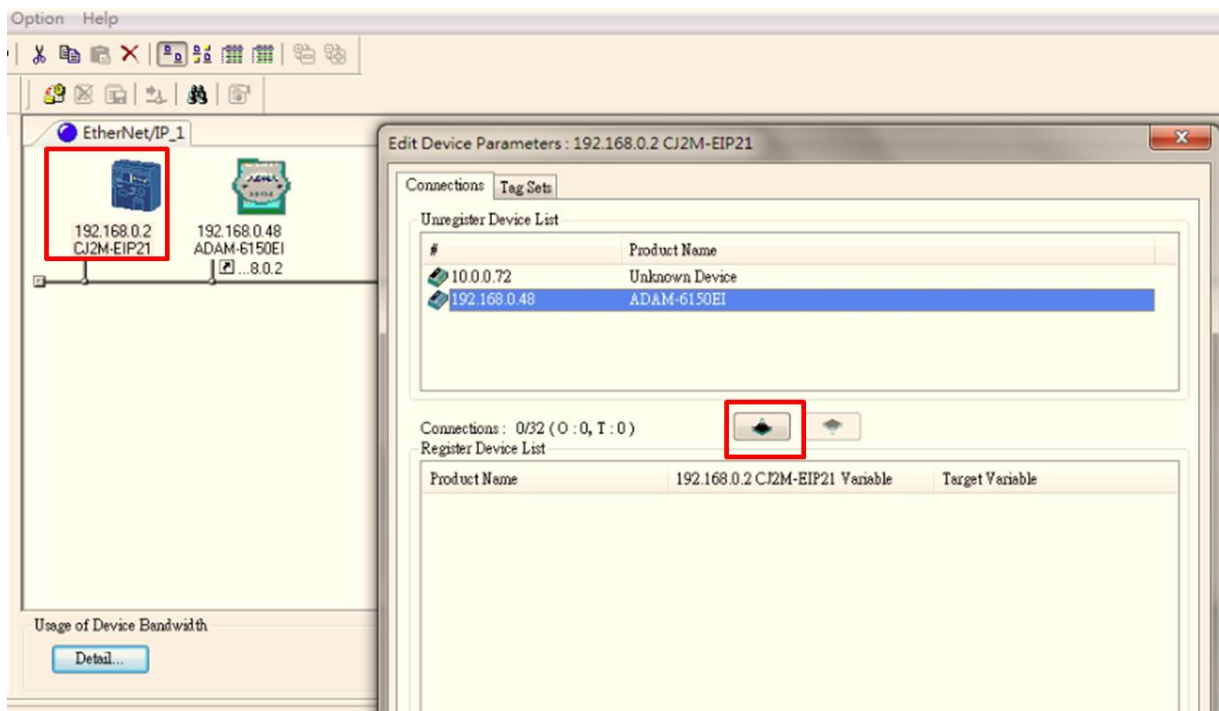

5. OMRON PLC and ADAM-6100EI are shown on the Network

- Double click the OMRON PLC item to configure the device→select the ADAM-6100EI

device→click  button

- Select device→click **New**

8. Configure the variable of the PLC inputs for ADAM-6100EI
 Address 5000, Size: 2 Byte for DI
 Address 5100, Size: 2 Byte for DO
 →click **Regist**

192.168.0.48 ADAM-6150EI Edit Connection

It will add a connection configuration to originator device.
Please configure the Tag Set each of originator device and target device.

Connection I/O Type : APAXConn1

Originator Device

Node Address : 192.168.0.2
 Comment : CJ2M-EIP21

Input Tag Set : Edit Tag Sets
 5000 - [2Byte]

Connection Type : Multi-cast connection

Output Tag Set : Edit Tag Sets
 5100 - [2Byte]

Connection Type : Point to Point connection

Target Device

Node Address : 192.168.0.48
 Comment : ADAM-6150EI

Output Tag Set : Input_102 - [2Byte]

Input Tag Set : Output_101 - [2Byte]

9. Click **Network**→ **Download**

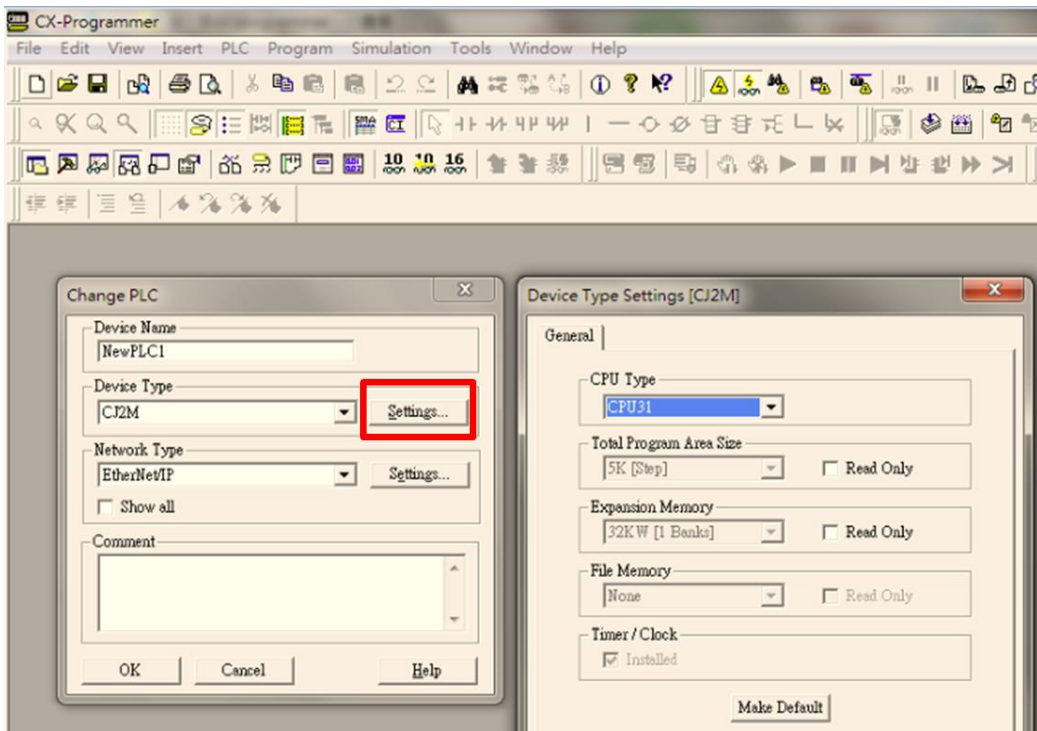

10. Network setup is completed

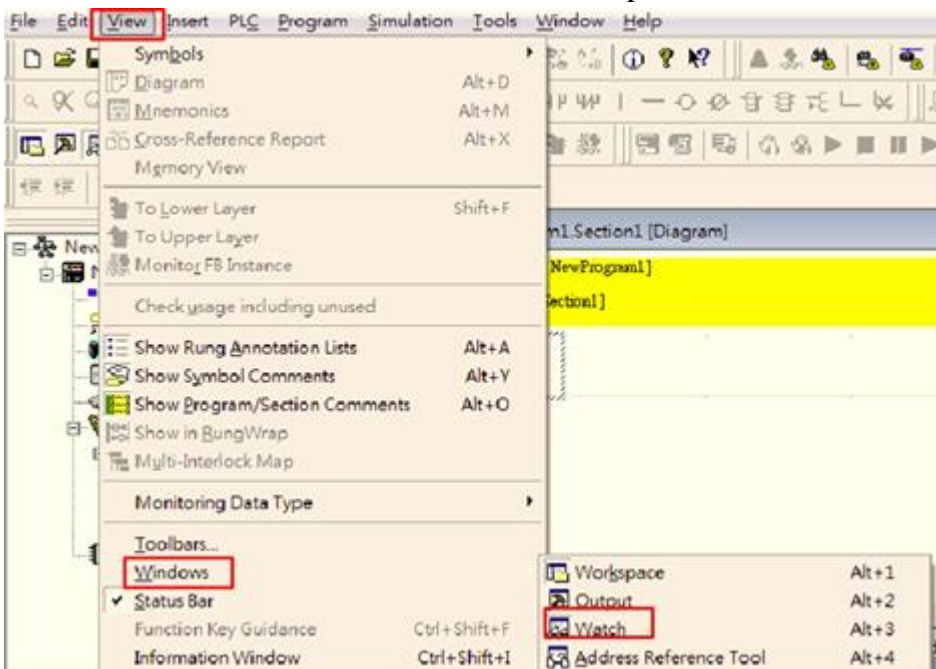

CX-programmer to Test the Configuration

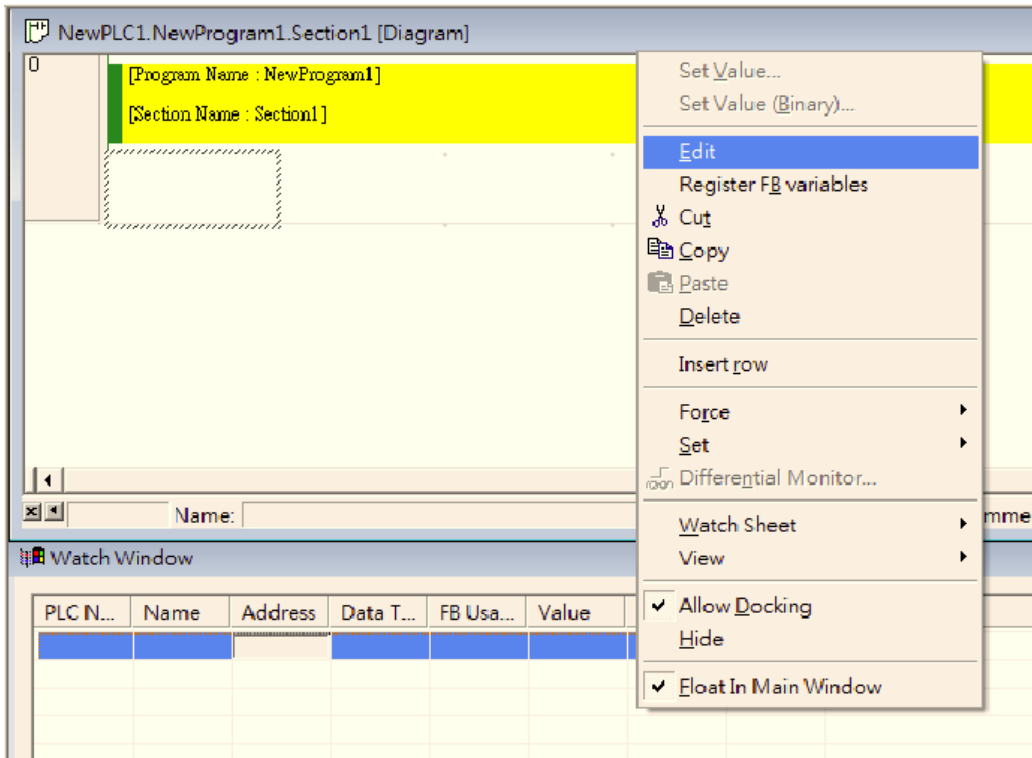

1. Open CX-programmer→click New button→ click **setting** to choose the CPU type of PLC

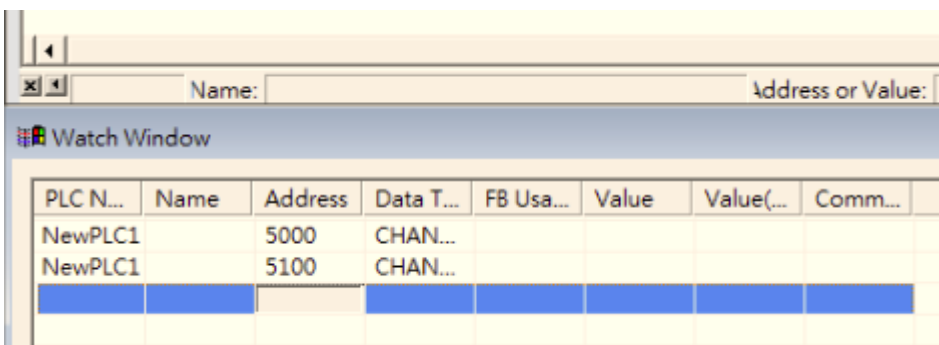

2. Click **View**→**Windows**→Click **Watch** to open the Watch Window

3. Right click on watch window→click **Edit**

4. Enter 5000 (PLC address of the inputs) in the Name or address column
 Enter 5100 (PLC address of the outputs) in the Name or address column
 The variables are listed in Watch Window

5. Click **PLC**→ **Work online**

6. Bit values will display status of ADAM-6100EI series in watch window
